

Engineer or Technician for Infrastructure and Utilities (f/m/d)

Job Description Summary

Today, Lonza is a global leader in life sciences operating across three continents. While we work in science, there's no magic formula to how we do it. Our greatest scientific solution is talented people working together, devising ideas that help businesses to help people. In exchange, we let our people own their careers. Their ideas, big and small, genuinely improve the world. And that's the kind of work we want to be part of.

We are currently looking for several (Junior) Infrastructure & Utilities Engineers (m/f/d) at our Visp location. As an Infrastructure & Utilities Engineer in Ibex™, you are responsible for the proper operation, maintenance and control of the systems / installations such as Clean Steam, Purified Water, Water for Injection, Heating Ventilation & Air Conditioning Systems (HVAC) and the Black Utilities in compliance with the GMP requirements. In addition, you are responsible for the areas of access control and waste management, as well as for the acoustic and fire alarm system.

Key responsibilities:

- Control, support and organization of the ongoing monitoring of the clean media systems
- Processing of deviations that have arisen in cooperation with QA, QC and operations, as well as definition of appropriate measures and preparation of monthly reports
- Coordination of the interfaces to operations, operations engineering, as well as QA and QC
- Responsible participation in audits and inspections to present the procedures and processes of the clean media systems
- Responsible for the coordination of the membrane change and the visual inspection of the relevant systems, investigations of deviations, as well as definition and implementation of measures together with QA, QC and operations
- Responsibility for all media in the black area, waste management and the correct disposal of liquid and solid waste
- Daily monitoring of error messages and creation of orders, as well as active participation in finding a solution

Key requirements:

- Successfully absolved training at a technical school (HF) or bachelor's degree in mechanical engineering or process engineering, alternatively completed industrial training with several years of professional experience
- Professional experience in a GMP regulated technical field, as well as understanding and knowledge of utilities and GMP requirements
- Experience in change management
- Good IT skills, especially in Office, SAP, DeltaV (process control system)
- Very good knowledge (spoken and written) of either the German language or the English language. Willingness to improve German and English skills from the start of work if one of the two languages is not at a very good level

Every day, Lonza's products and services have a positive impact on millions of people. For us, this is not only a great privilege, but also a great responsibility. How we achieve our business results is just as important as the achievements themselves. At Lonza, we respect and protect our people and our environment. Any success we achieve is no success at all if not achieved ethically.

People come to Lonza for the challenge and creativity of solving complex problems and developing new ideas in life sciences. In return, we offer the satisfaction that comes with improving lives all around the world. The satisfaction that comes with making a meaningful difference.
